ITFS and 3G Notice of Proposed Rulemaking and Order ET Docket No. 00-258 (FCC 00-455)

The Alliance for Distance Education in California (ADEC) opposes jeopardizing the current educational use of the 2500-2690 Megahertz (MHz) radio frequency band to accommodate Third Generation (3G) mobile systems, as proposed in FCC Docket Number 00-455 (ET Docket No. 00-258). ADEC is an intersegmental group of people working at California universities, colleges, adult education systems, kindergarten through twelfth grade school districts, schools and private sector institutions, organizations and companies which support distance education in the state of California. Our organization supports distance learning initiatives and encourages development of informed distance education policy, laws and regulations.

Lifelong Learning in the Information Age

ADEC believes 3G mobile operations should not disrupt or replace the wireless dissemination of educational offerings by the more than one hundred California schools, colleges, universities and other educational institutions and organizations that currently use the 2 Gigahertz (GHz) Instructional Television Fixed Service (ITFS) spectrum. For over three decades ITFS on the 2.5 through 2.69 GHz band has been used in California to expand and enhance the learning experiences of hundreds of thousands of kindergarten through twelfth grade students, college and university undergraduate and graduate students, and postgraduate professionals such as teachers, medical doctors, nurses and engineers.

Narrowing the Digital Divide with New Technologies

The recent advent of digital two-way ITFS operations allows adding educational offerings like the Internet and other digital data, voice and video services, especially to underserved students and professionals in rural and urban areas where wired media provision of such services is either unavailable or extremely expensive. Unfortunately, if ITFS operators have to share this band with 3G mobile operations or, worse yet, if ITFS operators are moved in whole or in part out of the 2 GHz spectrum, vital educational

services developed over decades could experience harmful disruption to their quality educational programming and severe reduction of their services.

3G Could Destroy Vital Educational Programs

MDS (Multipoint Distribution Service—a commercial 2 GHz service) operators currently provide millions of dollars in needed funding to ITFS licensees throughout California through excess capacity leasing agreements. Many vital elementary, secondary, undergraduate and graduate educational programs may be destroyed if MDS operators are unable to continue providing such financial support for ITFS systems because of the economic impact of shoehorning technically incompatible 3G mobile systems onto the 2 GHz ITFS and MDS spectrum. Even the Federal Communications Commission's own November 15, 2000 interim report *Spectrum Study of the 2500-2690 MHz Band: The Potential for Accommodating Third Generation Mobile Systems* shows the imprudence of trying to operate 3G on the ITFS and MDS channels. The interim report states that "The 2500-2690 MHz band is in a state of rapid evolution by incumbent ITFS and MDS licensees...[and]...used currently to provide video services for education and training in schools, health care centers and a wide variety of other institutions, as well as for the provision of a commercial video distribution service known as wireless cable." The Commission's interim report concludes "Segmenting the 2500-2690 MHz band to enable third generation mobile wireless systems access to this spectrum would raise technical and economic difficulties for incumbents...[and]...could affect the economics of current and planned ITFS and MDS systems and their ability to provide service to rural areas."

Other More Compatible Spectrum

There are other bands of radiofrequency that 3G services could better operate on than the ITFS band. Even the currently allocated cellular radio spectrum could add 3G services with an efficient digital technology implementation. When the FCC fully considers the technical difficulties and economic harm to educators of imposing 3G on the ITFS spectrum, ADEC is confident that the Commission will allocate the 3G mobile service to a different radio frequency band that does not harm the education of California's school children, lifelong learners and professionals.

Sincerely,

Kitty Salinas, President
Alliance for Distance Education in California
